Astronomer

Giorgio Abetti, 1882- 1982, the son of noted Astronomer Antonio Abetti Giorgio was an assistant Astronomer at Collegio Romano Observatory in Rome. In 1921 at age 39 Giorgio became director of the observatory "Astrofisico Arcefrì". His work took Giorgio on expeditions to Siberia in 1936. Then in 1952 he went to Sudan. In late 1952 he went to Cairo Egypt where he met with other astronomers at Cairo University. Giorgio had spent some time on the possibility of life in the vast universe. This curiosity drew the attention of one of the university professors.

This led to Giorgio meeting with Alexander Lewis Manos. Manos introduced himself as someone with knowledge of extraterrestrial life. At first, Giorgio was skeptical yet intrigued as well. As time went on as more information was shown, Giorgio became a Believer.

In 1953 Giorgio was taken to a First Life Celebration on the shores of the Mediterranean Sea. Manos was older than Giorgio by several years at age 71. In 1953, Giorgio Abetti returned to Romano in Rome to continue his work. He did stay in contact with his Stavrosian friend Alexander Manos, until Giorgio died in 1982 at 99 years old.

Alex Manos opened up a new world for Giorgio. Manos wrote about Giorgio to the S.G.L. as a good friend of Stavros.

When Alex died in 1997 at 115 years old. He was honored at the 1998 First Life Celebration held in Cairo.

The Egyption Stavrosian families still hold their First Life Celebrations publicly so all can see. To hide would draw attention.
Well, that's the Stavrosian way.

S.G.L. Researcher
C. Smith
